Online glitch casino

A new glitch in Grand Theft Auto Online allows players to complete the Diamond Casino Heist far more easily by phasing through the vault wall.

Players have discovered a new bug in GTA Online that makes completing the Diamond Casino Heist much easier by allowing them to glitch through the vault wall. The casino heist mission is one of the most complex and challenging in Grand Theft Auto V's online mode. It was first introduced at the end of 2019 and tasks players with robbing the Diamond Casino & Resort but involves a large number of steps that can easily trip up players.

Casino online glitch

A recent leak for GTA Online suggested that the open-world experience might soon get a fresh UFO-themed mission for Halloween. The event was first leaked last year as part of the Alien Business Battles missions. However, the UFO has never been included in the title, with some suggesting that it would not be available until October so that it arrives just in time for the Halloween season.

A new glitch has emerged in GTA Online that allows players to complete the Diamond Casino Heist far more easily than the developers intended. According to Reddit user DistressedUnit, the bug occurs when two players try to drill into the vault at the same time. This can cause one of the players to phase through the wall and enter the vault without setting off any alarms, removing much of the challenge. Although the glitch has become more frequent recently, Game Rant reports that it has been known about for some time in the Grand Theft Auto community. Some users on Reddit even reported being able to consistently recreate the glitch and use it to quickly finish the Diamond Casino Heist in multiple playthroughs.

Online glitch casino

This is not the only glitch in GTA Online that is focused on the Diamond Casino & Resort. In fact, an earlier bug allowed players quickly steal paintings at the same time as breaking into a lockbox. This effectively gave players the opportunity to make twice as much cash as they would otherwise be able to earn. Unfortunately, this glitch was not as easily reproduced and so did not give users a new strategy to use when carrying out the Diamond Casino Heist.

In a game as large and complex as Grand Theft Auto, there are always going to be some glitches. It is just impossible for developers to ensure that a game is completely bug-free. Of course, enterprising players will often find a good use for such glitches just like with this latest example. While Rockstar is likely to patch out the glitch once it is brought to the studio's attention, users might be able to take advantage of it for now.

Nathan is a freelance writer with a passion for video games. He has contributed to a variety of outlets over the last five years and has written everything from breaking news stories to reviews of AAA games.

A New York man who said he has a gambling addiction has accused online casino operator BetMGM of plying him with free bets to keep him

from reporting game glitches to regulators, according to a lawsuit filed Wednesday.

Glitch online casino

Sam A. Antar alleged that BetMGM's online blackjack and other games repeatedly disconnected from BetMGM's servers, often while he had favorable hands, which wiped out potential winnings, according to the lawsuit. His winnings at times weren't available to him until he deposited more money into his account, further fueling his compulsive gambling that included more than \$29 million in bets in nine months, the lawsuit said.

GTA V may have come out way back in September 2013, but the game is still alive and well thanks to its consistently brilliant updates to online gameplay.

Online casino glitch

Whether you're new to GTA V Online or an experienced player, making easy money is always a high priority.

Luckily for us, Youtuber 'COURTZ' has discovered a great glitch that allows you to make money without the risk of losing any.

Online casino glitch

Drive to the casino, then open the menu. Head to the Online tab, then Options and set your Spawn Location to 'Casino Penthouse'.

SET YOUR SPAWN: Make sure you save and setting your Spawn Location

Glitch online casino

Once you've entered the Casino, head to Inside Track (the horse race betting section).

Once you've opened the betting computer, click the 'Place Bet' button on the bottom right (below).

Online casino glitch

Find the horse with the worst (or highest) odds. In this case, COURTZ bet on a horse that was 26/1.

Then, stake the maximum amount on your horse (10,000 chips) and click 'Place Bet'.

Glitch casino online

Now this is the important part. If your horse wins, happy days, you walk away with all your winnings.

ACT FAST: Quit and restart the moment you see you've lost the race

Casino online glitch

However if your horse is not going to win, quit the moment you realise it's got no chance of winning. Make sure you close your game before before the horses cross the finish line.

You should spawn back at the Casino, as that's where you set your Spawn Location.

Casino glitch online

UNLIMITED LIVES: You can quit and retry this glitch as many times as you want

You'll realise that you still have the full amount of chips that you had before you placed the losing bet.

Online glitch casino

Therefore, you can go back to the Inside Track and start this whole process again. Repeat this system until you win and as many times as you like!

Glitch online casino

So there you have it - a money glitch that allows you to make a ton of GTA dollars if you put a little time and effort in.

Rockstar will likely bring out a patch to rectify this glitch soon, so make the most of it while you can!

Online casino glitch

A massive thank you to Youtuber COURTZ for discovering and sharing this money glitch. Check out his full video below.

If you're looking for more honest ways of making money in GTA Online, the latest Rockstar update features a load of new features.

Glitch casino online

These features can be collected or completed (usually for cash rewards) so you should really consider these updates as opportunities for free money, and to expand your criminal empire.

This week, Rockstar announced the arrival of the Rune Zhaba, Double Business Battle Rewards, amongst a ton of other cool stuff.

Even if you've always lived by the straight and narrow in life, if you're an avid online gamer you must have at some point thought, "How can I hack online casino games?" or no deposit bonuses aren't enough for you.

Glitch online casino

Whether it's how to hack online casino slots, tables games or live casino, we've all wondered what it'd be.

But a lot of the time it's not that simple. Heck, a lot of the time it's not even legal and we at Lucky Street don't advocate for illegal casino hacking- it's far better to stick to straight-up, honest play.

Glitch online casino

However, we do recognize the importance of information so we can explain hacks that are being done today while strongly recommending that you do not attempt to hack slots!

Slots are possibly the most popular and loved type of casino games the world over.

Glitch online casino

It's no surprise that there have been many attempts to hack online casino software and slot machines (mostly illegal) and many theories and strategies to help maximise your playtime and hopefully your opportunities to win.

And sure, in the past, there were many ways of tricking land slot machines. Not so much now. Especially not so much when it comes to online slots.

Online glitch casino

Online slots operate according to an RNG (Random Number Generator) which means that every spin result is chosen completely at random and independent of the previous spin.

That means you cannot predict what will happen based on the preceding spins. It keeps things fair for both the casino and the player. This RNG makes it almost impossible to trip up the slot or outsmart it.

Casino online glitch

The only known way to hack online casino slot machines is highly illegal: downloading software, which is sometimes programmed for all online slots and sometimes specifically for one slot, and running that software alongside the slot to mess with it. You're screwing the casino over by invalidating the RNG and tipping it in your own favour.

Nowadays, online poker and all the other table games and live games are practically hack-proof unless you're using illegal online casino cheat software. You can even find cheat software that allows you to hack a slot machine with phones.

Glitch online casino

Often, these "hack casino apps" only exist to get access to naive person's data for suspicious reasons or even identity theft!

Another type of software which is extremely common is used for strategy botting, especially when it comes to blackjack and poker. These bots are automated computer gamblers who take the place of the player at a table and operate 24/7 according to pre-programmed strategies. They can make a player hundreds within a week if they go unnoticed (even though they mostly are).

Casino glitch online

The other popular illegal approach has nothing to do with software. It's called player colluding, and it's when players come together to form a group of sorts so that they can join certain poker rooms with pots or a roulette table, for example, and work together to stage a big win for one of the members. They then split the money among themselves.

While it hasn't been abolished, many online casinos have long taken measures against those who try to hack online casino games and they continue to develop new methods of stopping people who hack online casino software in this way.

Online glitch casino

Online roulette is more difficult to 'hack' because the wheel isn't a physical wheel but an RNG wheel. Once again, you'd need illegal software to get anywhere with this and we don't advise seeking that out.

The only tip we can suggest here is to go for French or European roulette games instead of American, since the single '0' greatly increases your chances of winning.

Glitch online casino

Online poker used to be well known for its vulnerabilities: once, in the early days, a group of gamers found out that a particular casino's online poker's RNG wasn't choosing completely at random but instead choosing from about 200,000 possible deck configurations.

They crunched the numbers and figured out a way to cheat the casino out of a sum of money. Still, we're only telling you this today because the word got out and they got punished for it.

Casino online glitch

Counting cards in Blackjack is a notorious strategy which, while disliked by many casinos and can get you black-listed from them, isn't actually illegal.

Unfortunately, counting cards does not work for live table games or at online casinos. Card counting requires that you, as a player, know how many decks of cards are in the dealer's shoe- the device from which they're drawing cards.

Glitch casino online

You don't have a visual line of sight to the shoe at virtual casinos. So even though you might not be making any card counting mistakes in your head, you'll still be off count because you can't be sure of the number of decks the dealer is taking from.

This is also not recommended because even if you get money out of the illegal software, most online casinos still have a period to verify the legitimacy of the funds. You're likely to get caught and you won't be able to withdraw.

Online glitch casino

It's far better to just play online casinos for fun and without trying to hack or cheat them. There are signup bonuses you can find that help give you a bigger starting bank roll.

The short answer is yes, it's possible. The longer answer: yes it's possible but so difficult that it's not even worth it. Casino hacking dates back to the physical slot machines where it was possible to cheat a slot machine with a magnet! In this way, you were able to manipulate a slot machine while playing at the physical casino. However, many casinos are present online, which is why hacking became much more difficult.

Online glitch casino

Even if an online casino's security isn't capable of keeping hackers out, it's usually enough to catch them after a certain amount of time.

Online casinos today are more heavily protected than some banks (and there's more money in hacking banks than in hacking online casinos since the latter don't have the right to keep any virtual money on their servers). They know that some players are out there, even if that involves cheating. Online casinos don't want that to happen!

Casino online glitch

Online casino servers are usually heavily guarded in special facilities, in fire-proof rooms with surveillance cameras everywhere. It's not like one can just walk in and illegally hack the casino software; it's far from that easy!

They say "never say never again", and it's true that there have been a few online casinos that have been hacked and had their gaming software manipulated to lean in the favour of the hacker.

Online casino glitch

It's also true that the hackers managed to get a bit of money out of it. But these cases are rare and the vast majority of hackers get caught. Most notably, online casino hacks like these happened in the infancy of online casinos when security wasn't as tight as it is today.

So if you happen across some random advertisement telling you it'll give you access to a hacked casino, it's probably a scam and you should avoid it all costs.

Glitch casino online

We recommend honest online casino play. Grab a free spin bonus to stretch your wallet a bit farther, but other than that, don't try and cheat an online casino.
