Slot machines remain one of the most popular casino games .

The output values of PRNG seem completely random and impossible to predict at first glance.

This is what even simple PRNGs do.

There is quite a lot of evidence that Alex has managed to successfully apply his strategy on an outdated Aristocrat MK IV slot machine.

Then it is pulled back out and used again and again.

I think that it's possible scenario.

However, not all ways that have been previously used to "beat" slots are like that.

The emphasis is on avoiding losses and boosting your chances of winning jackpots, free spins, and strong symbol combinations, rather than on how to earn the most money.

In traditional gambling terms, a "loose" person is someone who bets money frequently and loses it.

He ordered a load of these chips, reprogrammed them, got his hands on slot machine keys and replaced their chips.

So, if it's not possible to prevent the house from keeping a profit, what you can do is choose the games where the house advantage is lower, and learn to minimize the banking advantage.

You can play blackjack if you simply know the fundamentals, but there is a rule that enables you to double your bet at specific points throughout the game.

Okay, let's get to it. Here are some of the ways slot machines have been cheated in the past.

Carmichael managed to create a very simple yet functioning contraption.

We will also provide some tips on how to manage your bankroll and avoid going bankrupt while gambling.

To be able to predict and exploit the RNG sequence in a real slot machine placed in a casino, you'll also need to know something else – the current RNG seed value.

And that's exactly what a coin on a string does.

Programs may only work on specific machines.

Complex machines can even learn what opponents are most likely to do in a given situation in a game such as poker.

That's in huge contrast with many theft techniques described later in this article, which fool slot machine hardware to dispense more money than intended.

It may look like a lot, but current computers are very fast and this number of options can easily be examined by brute force (takes 4 seconds on my laptop).
